

Swan Analytical AMI Codes-II TC TOTAL CHLORINE ANALYSER

The Swan AMI Codes II TC analyser provides fully automated total chlorine readings from the RO plant every 15 minutes. A continuous sample is taken after carbon 1 and automatically measured using the colorimetric method. The information is relayed to staff in the ward via the Pervasive Telemetry platform.

To view the information, you'll need to be logged into the Pervasive Telemetry system. A login will be provided to your NUM. The information can be viewed on a computer, tablet or mobile phone.

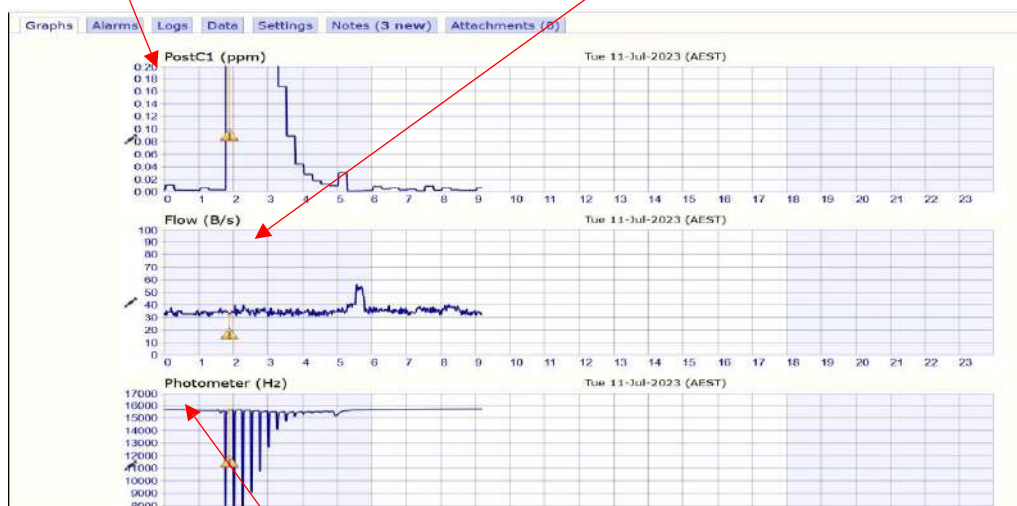

Once logged in, the graphs will appear.

- Graph 1: Total Chlorine Level**
- Graph 2: Flow Rate At Analyser**
- Graph 3: Photometer Performance – (Hz)**

Graph 1 enables staff to see any increasing or decreasing trends in total chlorine levels between carbon 1 and carbon 2.

Graph 2 shows the number of bubbles per second flowing through the photometer. This is important to the operation of the analyser as the bubbles indicate that flow is present, and the system is operating.

Graph 3 shows the spectral intensity of the photometer. This is crucial as any degradation to the photometer will have an impact on the total chlorine readings.

Please note: The Codes II TC Analyser is fitted with an automatic cleaning module. This is scheduled to complete a cleaning cycle every day at 12am midnight. The unit automatically flushes at the completion of the cleaning cycle so will not affect daily operations. Carbon Filter 2 backwash may cause high level alarm trigger, this is normal.

Alarms

The Alarms tab shows a record of all alarms recorded. This can be cleared if required.

Settings

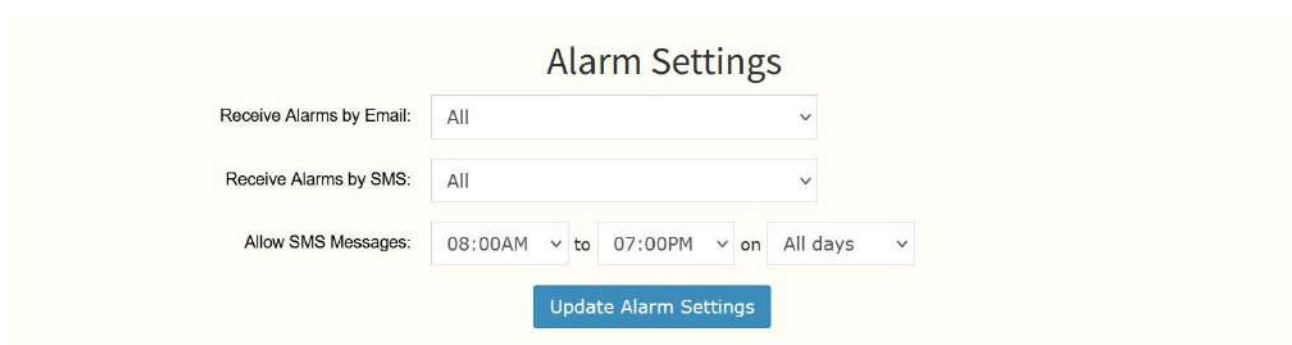

The Settings tab enables users to change general information, variables and alarms.

The screenshot shows the Settings page with the following sections:

- General**: Site Name, Configuration: SA Codes, Time Zone: Australia/Sydney, Logging Interval: 1 Minute, Connect Interval: 1 Hour, Last Connected: 11-Jul-2023 10:16:18 AEST, IP Address, Serial #, Software Build: 390, Company: Swan Australia, Signal Strength: 32%, Locale, Tower Location: [Map](#), Overview Page Order: 0, Home Tab: Default, Note When Settings Modified: Yes, Note When Offline: No.
- Variables**: High_CI_Level: 0.1, Low_Flow_Rate: 5.0, FOMEwarningLevel: 10000.0.
- Alarms**: (Section header visible, content partially obscured)

You are able to select how you would like to receive alarms (by Email and/or SMS). You are also able to nominate times that you would like to receive alarms and block out times when you do not want to receive alarms.

The Alarm Settings form includes the following fields:

- Receive Alarms by Email: All
- Receive Alarms by SMS: All
- Allow SMS Messages: 08:00AM to 07:00PM on All days
- Update Alarm Settings button
